SustainOpt Sustainability Report

Organization: VIT
Generated: 2026-09-30T18:17:33.860705900

Dashboard Summary

Total Metrics: 1
Electricity: 1200.0
Water: 4500.0
Waste: 180.0
Carbon: 520.0
Average Renewable Energy: 42.0
Average Transport Emission: 90.0

Sustainability Assessment

Overall Score: 74.41666666666667
Grade: Average
SHI Score: 78.43
SHI Status: Good
Estimated Cost Saving: 18.0

Recommendations

• Reduce electricity consumption by using energy-efficient equipment and LED lighting.
• Reduce water consumption by fixing leaks and installing water-saving fixtures.
• Improve waste segregation and increase recycling initiatives.
• Lower carbon emissions by optimizing operations and using cleaner energy sources.
• Increase renewable energy adoption through solar panels or green energy procurement.
• Reduce transport emissions by encouraging carpooling, electric vehicles, or remote work.

AMSDOA Decision Engine

Action: Increase renewable energy adoption through solar panels or green energy procurement.
Priority: 88.3
Impact: Low
Cost: High
Urgency: Low
Explanation: Renewable energy usage is below the desired level. Increasing renewable energy adoption can improve the organization's sustainability profile.

Action: Lower carbon emissions by optimizing operations and using cleaner energy sources.
Priority: 87.8
Impact: High
Cost: Medium
Urgency: High
Explanation: Carbon emissions are above the target level. Reducing emissions through cleaner energy and operational improvements can provide significant sustainability benefits.

Action: Reduce transport emissions by encouraging carpooling, electric vehicles, or remote work.
Priority: 87.6
Impact: Medium
Cost: Medium
Urgency: Medium
Explanation: Transport emissions are high. Encouraging carpooling, electric vehicles, or remote work can reduce transport-related emissions.

Action: Improve waste segregation and increase recycling initiatives.
Priority: 68.2
Impact: High
Cost: Medium
Urgency: High
Explanation: Waste generation is above the acceptable threshold. Better segregation and recycling can reduce environmental impact.

Action: Reduce electricity consumption by using energy-efficient equipment and LED lighting.
Priority: 64.9
Impact: Medium
Cost: Medium
Urgency: Medium
Explanation: Electricity consumption is higher than the recommended sustainability threshold. Reducing electricity usage can lower operational costs and associated environmental impact.

Action: Reduce water consumption by fixing leaks and installing water-saving fixtures.
Priority: 62.4
Impact: High
Cost: Medium
Urgency: High
Explanation: Water consumption exceeds the recommended level. Implementing water-saving measures can improve sustainability performance.
